

COMMERCIAL DISPLAY PRODUCT MANUFACTURER

➔ Floor-standing inquiry machine series

VISION HAS ME, PERFECT PRESENTATION

CHARACTERISTIC >>>

SPARKLING AND SMART INTELLIGENT WORLD

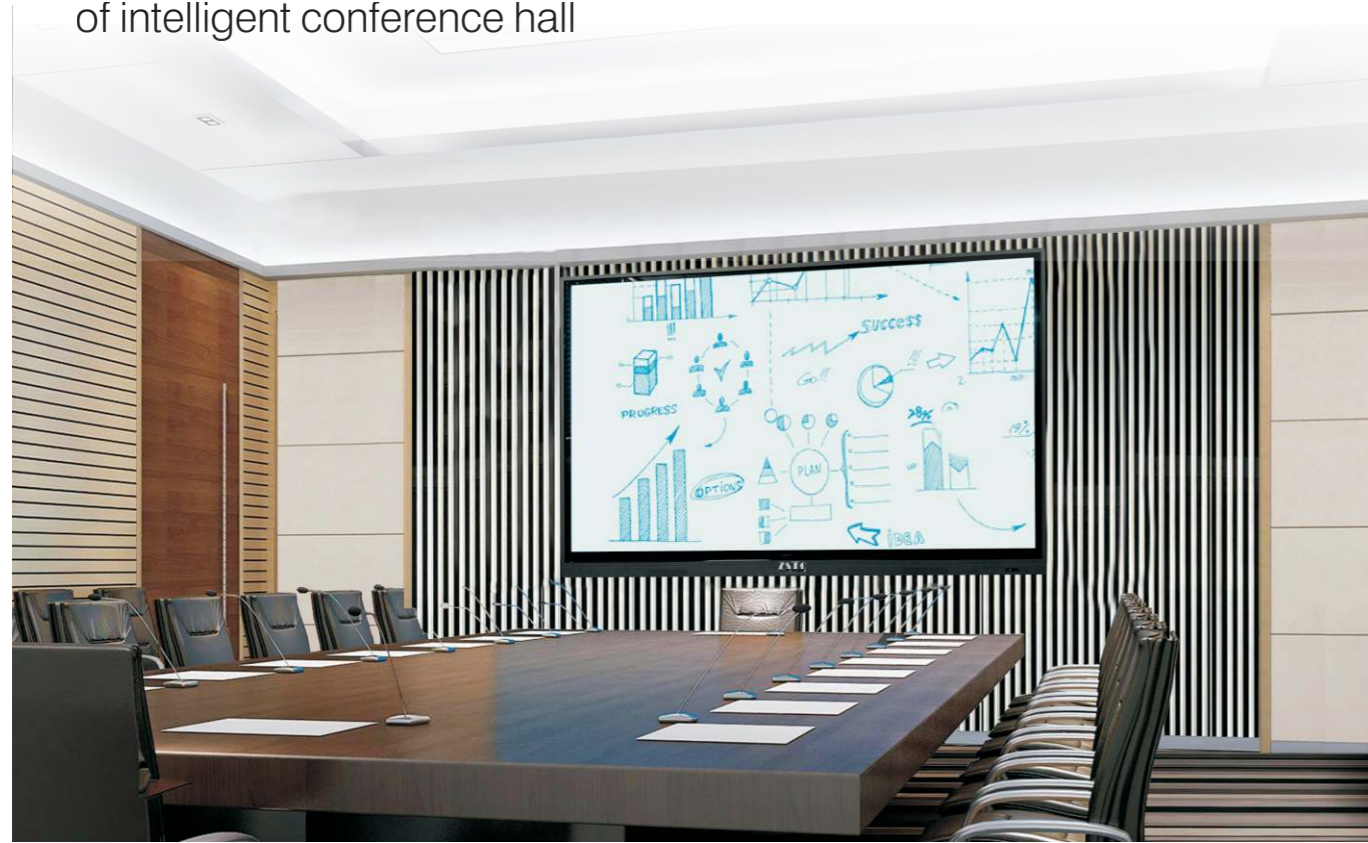

- The surface is fine-grained, smooth and even, simple and elegant, and the color is integrated with the industrial host, which has good anti-rust and wear-resisting functions;
- A variety of signal interfaces, supporting a variety of signal input / output;
- High reliability and high stability, suitable for education and training, exhibitions, public media, video conferencing, military command, traffic management.
- Adopt industrial industrial control board, Intel high-end dual-core processor, high-speed hard disk,

PROFESSIONAL CREDIBLE

- **system**
Windows7 / Windows10 / Android
- **application**
Book turning software, navigation software, query software, queuing software, ticketing software, ordering software, party building electronic information
- **Regular size**
18.5 / 21.5 / 32 / 43 / 49 / 55 / 65/75 inches
- **Touch mode**
Infrared touch / capacitive touch
- **External interface**
General: On (Off) button / AC (DC) power / HDMI / VGA / USB3.0 / USB2.0 / LAN / AUDIO / MI
- **Customizable:** COM / LPI / WIFI / Phoenix Terminal

of intelligent conference hall

The video conferencing solution is a kind of multimedia communication technology that enables people in different places to realize "real-time, visual and interactive" through a certain transmission medium. It can distribute various static and dynamic images, voice, text, pictures and other information of the characters to the terminal devices of each user through various existing electrical communication transmission media, so that geographically dispersed users can copolymerize one. At the same time, through the exchange of information through various means such as graphics and sounds, the ability of both parties to understand the content is increased, making people feel like they are immersed in meetings in the same venue.

OUTSTANDING PERFORMANCE

- **Flexibility**
Can be attached to any medium, such as transparent glass, liquid crystal display devices, LED display devices, etc.
- **Fashion**
The membrane is transparent, almost invisible to the naked eye, brilliant colors, three-dimensional images, and interactive ways.
- **Technical**
Capable of penetrating glass or other media for finger movement perception, commonly used in high-end technology industries
- **Durability**
The longer the usage time, the higher the commercial value.

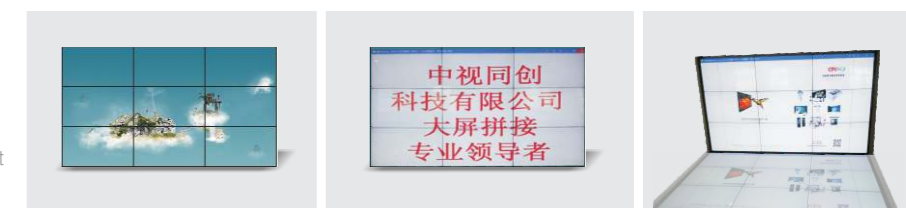

- **System**
Windows7 / Windows10 / Android
- **Regular size**
18.5 / 21.5 / 32 / 43 / 49 / 55 / 65/75 inches
- **Touch mode**
Infrared touch / capacitive touch

OUTSTANDING PERFORMANCE

- With the development of the information age, splicing screens have been widely used in meeting rooms of major government agencies/groups/enterprises; traffic law enforcement departments/commercial/banking/community/enterprise monitoring rooms; exhibition halls/bars/restaurants/hotels / School / hospital and other places.
- At the same time, it also supports high-end display functions such as multi-screen, roaming, picture-in-picture, overlay, zoom, single-screen multi-screen display. The controller is tailored to the customer's requirements and is dedicated to the maximum performance of the display unit. With high-definition picture quality, flexible combination and rich display content, it gives users the largest free design space and provides powerful display effects.

- Use the best hard screen.
- 1920*1080 (full HD resolution) is the best tool for advertising display, using well-known brand panels.
- With 16.7 million different colors, it is an expert color and presents real images.
- The picture can be spliced, single-screen, multi-screen, full-screen smart splicing, and multiple choices.
- The screen can be placed on the splicing screen through the computer.
- In the analog high-definition surveillance system, IPS noise reduction technology upgrades the traditional 2D technology to 3D technology. Based on the original intra-frame noise reduction, the frame-to-frame noise reduction function is added to simulate the HD ISP image and The function of wide dynamics has been greatly improved, making the light and dark parts of the image clearer and closer to the actual observation effect of human beings.
- The 178° super wide viewing angle can be seen obliquely.
- Long life, up to 50,000 hours. High-definition picture quality, no radiation, no eye injury, green and environmental protection.
